## **PROSTRIPER II** Modular Striping System

Dispensing Technology is pleased to introduce the *PROSTRIPER II*, Modular Striping System. This versatile, heavy duty compact striping system is available for paint, epoxy, methacrylate and modified urethane traffic marking materials. Whether you are spraying single or plural component materials, flat line or structured markings, Dispensing Technology can help.

Designed from the ground up specifically for road marking, the *PROSTRIPER II* features unrivaled stability in a small compact system. Heavy duty hydraulic wheel motors, low flex tires, wide stance front caster with tapered bearings and hydraulic steering, combine to make this machine stand out. The 24 HP water cooled engine, industrial strength hydrostatic drive and ergonomically designed controls and operator station allow most individuals to be productive with a minimum of training and a very short learning curve. The machine shown in this data sheet is a two color, two pump system with a bead gun for each paint gun. Each paint and bead gun combination has a gun elevator for line width adjustment right from the operators position using a switch on the dash. It has two 40 gallon paint reservoirs and a 500 lb pressurized bead system. By adding an additional paint and bead gun, dual color highlight and contrast markings can be painted. There are many combinations available. Give us a call and let us help you configure a striper specifically for your requirements.
